

ICPU-16 for imc CRONOScompact (CRC/ICPU-16)

16-channel Voltage Amplifier

The **ICPU-16** module is a measurement amplifier for 16 differential, analog voltage or ICP-channels, available as a plug-in module for the imc *CRONOScompact*. Due to its BNC terminal for direct connection of ICP sensors (ICP™-, DELTATRON®-, PIEZOTRON®-Sensors), it is well adapted for applications in the fields of noise and vibration measurement engineering.

imc CRONOScompact - modular measurement system

imc *CRONOScompact* is a modular and reconfigurable hardware a "rack"-based series of devices available in a variety of housing sizes and device frames. imc *CRONOScompact* (CRC) plug-in-modules can be inserted into the system (CRC-400GP).

Once the modules are plugged into a portable or rack-based housing, they are electrically connected to the CRC-system and are supplied by the system with power. The data storage will be managed by the CRC-system.

Rack-based modules ("-R") differ from the standard modules only in terms of the front panel's attachment mechanism.
