

ISO2-8(-16)-2T for imc CRONOSflex (CRFX)

8- or 16-channel, isolated measurement amplifier for thermocouples

This imc CRONOSflex Measurement Module is equipped with 8 (CRFX/ISO2-8-2T) or with 16 (CRFX/ISO2-16-2T) isolated channels for the measurement of thermocouples of type K.

Highlights

- complete channel individual isolation and conditioning (filter, ADC)
- high bandwidth for acquisition of dynamic processes
- direct connection of thermocouples type K via miniature thermocouple terminal connector

imc CRONOSflex- Frameless expansion, flexible modularity

The imc Click Mechanism and extruded aluminum case provide a firm mechanical and electrical connection. As a result, no mainframe or rack is needed.

An imc CRONOSflex system uses EtherCAT as an "internal" system bus for connecting various modules to the main base unit (CRFX-400 / CRFX-2000G). With the system bus, all imc CRONOSflex modules are guaranteed to be synchronized with each other. This allows various modules to be either connected in one central block or connected via standard network cable in a spatially distributed system.

Alternatively, connection can be made by means of standard Ethernet cables (RJ45, CAT5), thus creating a spatially distributed system.
